- Note:

 Microwave can penetrate walls or glass thinner than 20cm, movement in adjacent corridors may be detected.

 Detection area will be affected by speed of motion, mounting height and movement volume.

 Installation shall not be mounted to avoid false trigger caused by the luminaire itself shaking. (Rooftop HVAC, upper floor vibration, etc.)

 Shall not be installed next to large operating machines such as ventilator/ceiling false triggering caused by machine vibration.

 They cannot penetrate metal. Large metal object near the sensor may create a "dead zone" behind it.

 Microwave sensors have advantage over PIR device in that they can operate in hot environments, however, they are sensitive devices and can be prone to false detection by everyday items like ceiling fans, moving branches or curtains, loose packaging, etc.

Other options may be available, consult Turolight Sales. Specifications and data are subject to change without notice.
